

DOCUMENT #9 OF 10 — PROJECT STATE TRACKER

tracker.md — AI Agent Dynamic State Tracker

Real-Time Feature Status, Automated Self-Updating Protocols & Task Completion Logs

Tracker Type	Total Core Milestones	Execution Progress	Document Version
Automated Agent State Ledger	10 Documents & Modules	90% Complete (Phase 9 of 10)	v1.0 (Live State)

1. AI Self-Modification Protocol

The `tracker.md` document functions as the single source of truth (SSOT) during codebase generation. Whenever the AI agent completes, modifies, or refactors a file or feature, it must autonomously update this tracking document following these rules:

- Agent Update Directives:
- **Status Sync:** Flip milestone status from `[ ] Pending` → `[/] In Progress` → `[X] Completed` upon test verification.
 - **Change Logging:** Append timestamped diff entries detailing which functions, schemas, or components were modified.
 - **Blocker Escalation:** Immediately record breaking changes, dependency issues, or API rate limit events.

2. Document & Feature Deliverables Tracking Table

ID	Module / Document Name	Delivered Scope & Key Artifacts	Current Status
01	PRD Document	Executive summary, 10 feature breakdown, personas, success KPIs, roadmap.	Completed (PDF Ready)
02	TRD Document	React 19 + TypeScript + Supabase + Gemini/Claude API architecture.	Completed (PDF Ready)
03	APP FLOW Document	User journey, navigation rules, core screen logic, edge page handlers.	Completed (PDF Ready)
04	UI/UX Design Brief	5 verified screens (Home with 4 KPIs, Upload, Analysis, Ranking, Summary).	Completed (PDF Ready)
05	Backend Schema	8 PostgreSQL tables (users, projects, tasks, candidates, payments), RLS policies.	Completed (PDF Ready)
06	Implementation Plan	7-stage agile delivery roadmap from project init to production deploy.	Completed (PDF Ready)
07	rules.md File	10 strict coding, styling, security, and state management rules for AI agent.	Completed (PDF Ready)
08	SRS Document	RBAC permissions matrix, functional workflows FR1-FR4, 5 edge scenarios.	Completed (PDF Ready)
09	tracker.md File	AI self-modification protocol, milestone log, and audit registry.	Completed (PDF Ready)
10	Mandatory Items Check	Loading states, error boundaries, debugging, API caching, backend checks.	Next in Queue

3. Autonomous Agent Audit & Verification Log

Latest Completed Modifications:

- `UIUX_ScreenAI_Updated.html`: Successfully integrated the 4 recruiter status KPI cards (*Total, Shortlisted, Rejected, Pending Review*) into Screen 1.
- `TRD_Custom_ScreenAI.html`: Fully updated technical stack to React 19, TypeScript, Vite, Supabase, Google Gemini/Claude API, Leaflet.js, and Web Speech API.
- `Backend_Schema_ScreenAI.html`: Verified PostgreSQL DDL scripts with strict multi-tenant Row Level Security (RLS) enforcement.
